Denys Zagorodny

Product Designer

PROFESSIONAL SUMMARY

I'm a Product Designer with 7 years of experience designing SaaS and B2B products mostly for fintech and API security. I enjoy finding ways to make complicated products simpler and easier to use. My experience includes improving user flows, designing interfaces and building design systems. I work closely with product managers and developers to understand requirements and find solutions that work for both users and the business.

SKILLS

UX & Product Design

User Flows, Information Architecture, Interaction Design, Complex Workflows, Wireframing, Prototyping, UX Audits, Accessibility

UI & Visual Design

Interface Design, Layout, Typography, Visual Hierarchy, Responsive Design, Design Consistency

Design Systems

Component Libraries, Figma Variables, Design Tokens, Variants, Component States

AI-Assisted Design

AI-Assisted Analysis, Ideation, Rapid Prototyping, Design Exploration, Design Critique, Workflow Automation

Collaboration

Cross-functional Collaboration, Design Handoff, Design Reviews, Developer QA, Requirements Clarification

Domains

B2B SaaS, Enterprise Software, Cybersecurity, Fintech, Transportation

EXPERIENCE

2024 – 2026 | API Security

Senior Product Designer, Akamai UK

- Designed and improved complex workflows for an enterprise API security platform, focusing on usability, navigation and interaction consistency.
- Identified UX issues involving permissions, navigation, edge cases, interaction states and dependencies between product areas.

EDUCATION

2020 | Interaction Design Foundation

Human-Computer Interaction (Certificate)

2020 | Interaction Design Foundation

User Experience: The Beginner's Guide (Certificate)

LANGUAGES

English - Fluent

Russian - Native

Hebrew - Fluent

- Translated technical requirements and product challenges into clear user flows, intuitive interfaces and practical design solutions.
- Collaborated with product managers, engineers and other designers to evaluate solutions, refine interactions and prepare detailed Figma specifications for development.

Key Contributions

- Redesigned the API Groups experience, including 4 key UX improvements: visual group identification, favourite views, advanced filtering and recently viewed groups.
- Redesigned the main navigation, improving information architecture and making the product easier to navigate.

2022 – 2024 | API Security

Product Designer, Noname Security (Startup)

- Designed and improved user experiences across an enterprise API security platform.
- Translated product requirements and complex technical information into clear user flows, wireframes and high-fidelity interfaces.
- Identified usability issues and opportunities to improve navigation, interaction patterns and consistency across different product areas.
- Collaborated with product managers and engineers to clarify requirements, refine proposed solutions and prepare designs for implementation.

Key Contributions

- Designed and improved user experiences across 3 design initiatives, including main navigation, API repository inventory and documentation website.
- Designed standalone table filtering and customisable saved views, enabling users to save, edit and revisit frequently used data configurations.
- Organised, improved and maintained the design system, making components easier to find, reuse and keep consistent across the product.

2021 – 2022 | Fintech

UX/UI Designer, Melio (Startup)

- Developed and improved the design system for a B2B payments platform, building on an incomplete library of existing components.
- Identified inconsistencies in existing interfaces and explored opportunities to consolidate visual patterns and improve component reuse.
- Created and maintained reusable Figma components, defining variants, states and consistent interaction patterns.
- Established shared visual foundations, including colours, typography and elevation styles, to improve consistency across the product.

- Collaborated closely with developers to refine component specifications, address implementation challenges and support the adoption of reusable UI patterns.
- Reviewed implemented components against Figma designs, identifying visual inconsistencies and providing feedback to improve implementation quality.

Key Contributions

- Expanded the existing design system from 11 to 42 reusable Figma components, increasing component coverage by roughly 4×.
- Helped streamline UI development through reusable components and standardised patterns, contributing to an estimated 10–15% reduction in UI development time, based on developer feedback.

2019 – 2021 | Fintech

Junior UX/UI Designer, Intuit - QuickBooks

- Supported the design and improvement of user interfaces within the QuickBooks payments experience.
- Translated product requirements and design feedback into interface updates and screen-level improvements.
- Worked closely with senior designers to refine layouts, visual hierarchy and interaction details while following established product guidelines.
- Collaborated with UX designers, product managers and developers to clarify requirements and support the implementation of design changes.
- Created and maintained interface designs using Sketch and later Figma, contributing to consistency across the payments experience.

ADDITIONAL DESIGN PROJECTS

2026 | Enterprise Transportation Management

Independent Product Designer, HQ Platform

Design System Development

- Developed a reusable Figma component library and organised design foundations, including colours, typography, spacing, radius and shadows.
- Created components with structured variants, properties and states using Auto Layout.
- Introduced design tokens to support consistency and future theming.
- Built a collection of starter pages demonstrating component usage in real product layouts.

Key Contributions

- Expanded the component library from 16 to 38 reusable components (138% increase), improving consistency and supporting greater component reuse.

- Standardised typography, reducing text styles from 13 to 8 (38% reduction), and introduced structured design tokens for easier maintenance and scalability.
- Created reusable starter pages for key product screens, providing consistent layouts and reducing the need to recreate common design patterns.
- Delivered a design system adopted by HQ's product designer, establishing a shared foundation for ongoing product design.

Information Architecture & Booking Experience Redesign

- Analysed the existing enterprise platform to identify navigation complexity, duplicated functionality and inconsistent terminology.
- Proposed a revised information architecture to improve feature organisation, discoverability and navigation clarity.
- Reviewed and redesigned the multi-step booking experience, addressing passenger selection, field organisation and interaction inconsistencies.
- Documented key workflows, page dependencies and design decisions.
- Produced designs intended to inform the platform's upcoming redesign.

Key Contributions

- Redesigned the information architecture, reducing the main navigation from 10 to 5 sections (50%) by consolidating related functionality and simplifying the product structure.
- Redesigned all 4 stages of the booking workflow, improving information hierarchy, clarifying user roles, simplifying payment selection and resolving inconsistencies in booking logic.
- Consolidated ride management, outstanding charges and receipts into a single section, to improve organisation and discoverability..
